

FROM IDEA TO THE FINISHED PRODUCT

DF Company has been specialized in the creation and production of **top quality fashion and sports clothing**, exclusively on “third-party accounts”, since 1992.

The typology of our products concerns technical, sports and fashion outerwear, down jackets and sea boxers, starting from the designer's sketch, we can carry out all the operational phases, up to the conclusion of the production cycle, that is, of the product intended for the customer.

The main characteristic of our company is to always **place the customer at the center of our operations**, pampering him and always looking for the best possible solution to satisfy his needs. Our staff has always worked with customers in order to satisfy the most diverse and subjective requests that are the basis of the characteristic of each one; precisely this "ad personam" method has allowed us to operate for years, in our sector, in continuity with high-end and luxury brands.

WE MAKE YOUR PROJECTS COME TRUE

From the drawing we proceed with the creation of the paper pattern and the creation of the **first prototype**; this always and only happens in our internal structure because being the first operational phase that translates the drawing into the garment, the synergy of work between pattern makers and sample makers is fundamental for the success of the product.

At this stage it is very important that the sample makers and the model makers constantly compare themselves to verify that the product is in line and corresponds exactly in every detail to what the customer requested, but that they can also compare and interact directly with those responsible for other processes, such as cutting, laser, down filling, etc. and that all information is timely and comparisons take place during the work; because the outcome of the result is the fruit of all these collaborations.

The productions can be made both in Italy and abroad depending on the customer's needs.

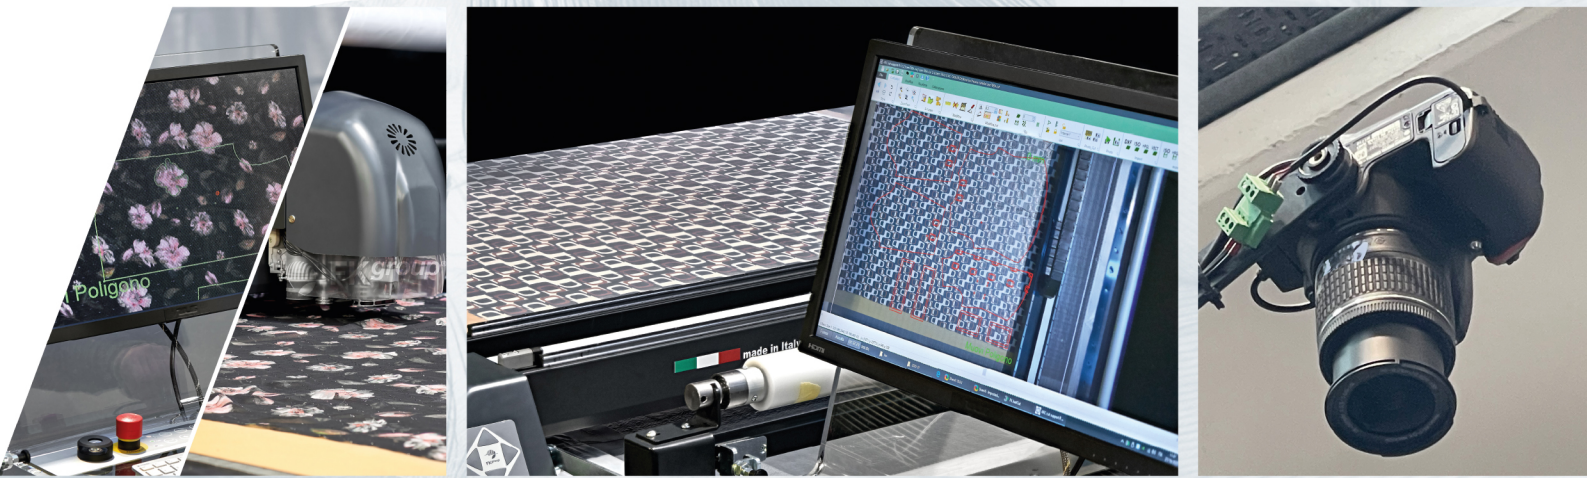

ATTENTION TO DETAIL IN EVERY STAGE OF PRODUCTION

Our headquarters, in addition to the modelling, prototyping, down filling, laser cutting and heat coating departments, has:

A cutting department with camera

This is the flagship for patterned fabrics, ideal for cutting logo/placed/monogram/checked fabrics, because in addition to allowing perfect centering of the details that then need to be assembled, it allows for significantly **optimizing consumption**.

An ironing department

The final testing and ironing phase always and only takes place at our headquarters, both for prototypes and samples and for production.

The packaging phase also follows the methods requested by each customer and can also be carried out for the final customer's destination.

The constant desire to renew ourselves and the flexibility in adapting to the needs of our customers, in addition to **the high level of professionalism and confidentiality** that distinguishes us, has allowed us and allows us not only to operate with very top brands but also to be able to receive their trust in our work, which is why we hope to soon be able to include you among our operating brands.

We invite you to contact us without delay for any clarification and/or request you may need.
